IMPORTANT SAFETY INFORMATION FOR FLUZONE HIGH-DOSE VACCINE

Fluzone High-Dose vaccine should not be administered to anyone with a known hypersensitivity (eg, anaphylaxis) to any vaccine component, including egg protein, or to a previous dose of any influenza vaccine.

If Guillain-Barré syndrome has occurred within 6 weeks following previous influenza vaccination, the decision to give Fluzone High-Dose vaccine should be based on careful consideration of the potential benefits and risks.

The most common local and systemic adverse reactions to Fluzone High-Dose vaccine include pain, erythema, and swelling at the injection site; myalgia, malaise, and headache. Other adverse reactions may occur. Vaccination with Fluzone High-Dose vaccine may not protect all individuals.

INDICATION FOR FLUZONE HIGH-DOSE VACCINE

Fluzone High-Dose vaccine is indicated for active immunization for the prevention of influenza disease caused by influenza A subtype viruses and type B virus contained in the vaccine. Fluzone High-Dose vaccine is approved for use in persons 65 years of age and older.

Before administering Fluzone High-Dose vaccine, please [click here](#) to see full Prescribing Information.
